

I concur with Declan McCullagh that attempting to graft 911 telephony regulations onto the internet is beyond the capacity of any organization to successfully implement and result only in additional burdens for carrier and customer alike without a realistic expectation of practical benefit as attempted by such a regulatory mandate. Additionally, expansion of 911 service beyond telephony raises unacceptable invasion of privacy and violation of Bill of Rights 1st Amendment freedom of association and assembly, as it requires both telecommunications carriers as well as government service agents to track every location where I may access VoIP service. When I purchase VoIP service, I fully recognize and accept that I won't have 911 service; I find this preferable to current mandates and inflated costs of 911 service for traditional telephony. Do NOT extend 911 tracking mandates to Voice over Internet Protocol (VoIP) service!!!
